

Adidas Sales Analysis

1. Project Overview

The Adidas Sales Analysis project was developed using Power BI to analyze Adidas US sales data and generate business insights related to revenue, profitability, product performance, and regional sales trends. The dashboard helps management monitor performance and support data-driven decisions.

2. Project Objective & Scope of Work

Objectives

- Analyze Adidas sales performance
- Identify profitable products and regions
- Track sales and profit trends
- Create interactive dashboards using Power BI

Scope of Work

- Data cleaning and transformation
- Data modeling and DAX calculations
- KPI and dashboard development
- Business insights generation

3. Data Source & Architecture

Data Source

- Source: Adidas US Sales Dataset (.xlsx)
- Records: 9,648
- Columns: 13

Architecture

Excel Dataset → Power Query → Data Model → DAX Measures → Dashboard

4. Implementation Steps

- Imported Excel dataset into Power BI
- Cleaned and transformed data using Power Query
- Created Date Table and relationships
- Developed DAX measures and KPIs
- Designed interactive dashboard pages
- Added slicers, navigation, and interactivity

5. Data Modelling

Tables Used

- Fact Table: Data Sales Adidas
- Dimension Table: Date Table

Relationship

Date Table[Date] → Sales Table[Invoice Date]

6. DAX Measures

- Total Revenue = `SUM('Data Sales Adidas'[Total Sales])`
- Total Profit = `SUM('Data Sales Adidas'[Operating Profit])`
- Total Units Sold = `SUM('Data Sales Adidas'[Units Sold])`
- Profit Margin % = `DIVIDE([Total Profit], [Total Revenue])`
- Sales LY = `CALCULATE([Total Revenue], SAMEPERIODLASTYEAR('Date Table'[Date]))`
- Sales Growth % = `DIVIDE([Total Revenue] - [Sales LY], [Sales LY])`
- Avg Price Per Unit = `AVERAGE('Data Sales Adidas'[Price per Unit])`

7. Dashboard Pages Summary

Index Page

- Dashboard navigation page
- Adidas branding and page routing

Executive Overview

- Revenue and profit KPIs
- Sales trend analysis
- Revenue by region and sales method

Product Performance

- Product revenue and profit analysis
- Units sold by product and retailer
- Product ranking analysis

Regional Analysis

- Region-wise sales analysis
- State-level performance
- Regional profit insights

8. Filters & Interactivity

Slicers Used

- Year
- Month
- Product
- Retailer
- Region

Features

- Cross filtering
- Interactive visuals
- Navigation buttons
- Dynamic analysis

9. Key Insights

- West region generated the highest revenue
- Men's Street Footwear was the top-performing product
- In-store sales contributed maximum revenue
- New York and California were top-performing states
- Revenue and profit showed strong growth trends

10. Conclusion

The Adidas Sales Analysis dashboard successfully transformed raw sales data into a professional and interactive reporting solution. The dashboard provides valuable insights into sales, profitability, products, and regional performance, helping support strategic business decisions.
